**The QuickPouch Mini is a compact desktop pouch form / fill / seal system that can form and fill over two million pouches per year.**

The QuickPouch Mini is a powerful tool for producing small liquid filled pouches. The Mini is economical to use for small runs, yet is still capable of producing over 2 million pouches per year. For many companies the QuickPouch Mini can pay for itself in just a few months, or less.

The QuickPouch Mini is a space saving desktop system that weighs in at around 100 lbs and takes up approximately 2.5 sq./ft of bench space (depending on options), the same size as many pouch openers. The QuickPouch Mini saves more than space, with a low initial cost and significant savings in pouch materials and labor costs the QuickPouch Mini can be an incredible asset to your business.

The benefits don't stop with cost, either. The QuickPouch Mini is a great way to increase quality. The QuickPouch Mini is a cycle-on-demand system that uses a hot die to imprint the pouch form. The time / pressure / temperature monitoring system ensures optimum, repeatable, validatable seal conditions for every pouch, every time

### FACTORY SPECIFICATIONS

Tabletop operation  
Fully automatic mode for production use  
Manual mode for intermittent use  
Tooling for one pouch size included  
Batch counter and total counter  
Single web standard  
Liquid filling standard
